

ANCRID FUNCTIONAL SPECIFICATION

PRODUCT SUITE	ANCRID
DOCUMENT CLASS	Canonical Product & Technical Requirements Document (PRD)
ECOSYSTEM PARENT	CCDP Powered by ANCR
INTEGRATION TYPE	Federated System Architecture (Zero credential duplication / SSO Dependent)
STATUS	Designed / Baseline Approved
LAST REVISED	9/3/2026

01. EXECUTIVE SUMMARY & CORE MISSION

Identity, authentication, authorization, permissions, and security. Serves as the universal Single Sign-On (SSO) and sole credential authority for all applications. Detail how this platform serves the 'Creator First' baseline. All system functions, designs, and capabilities must enforce user control, ease of deployment, and career growth.

02. SYSTEM BOUNDARY & RECORD OWNERSHIP

What this product OWNS:

- All core database collections unique to this vertical's domain.

What this product CONSUMES (strictly read-by-reference / never copied):

- ANCRID: Single-source-of-truth authorization claims, profile details, and identity matrices.
- Cross-Ecosystem Assets: Project assets and media linked by reference UUIDs.

03. FUNCTIONAL REQUIREMENTS

Specify primary functional user stories using tracking codes (e.g. REQ-ANC-100). Fully detail loading sequences, input validation states, transaction safety checks, and edge-case exceptions.

04. API CONTRACTS & EVENT SPINE EMISSIONS

All write transactions must publish corresponding events to the central Event Spine. Rest API backends must expose unified success/error models and authenticate incoming requests via secure bearer tokens.

05. THE ANCR PREMIUM DARK VISUAL SYSTEM

Maintain extreme parity with the premium editorial aesthetic: Obsidian dark canvases (#09090B), tinted border cards, muted typography, and energetic event highlight lines (Electric Amber, Laser Violet, or Neon Cyan).

06. SECURITY, DATA COMPLIANCE & PRIVACY

Enforce secure SSL communication. Mask and securely sign high-sensitivity parameters (such as wellness data, transaction details, or legal identities). Comply with all applicable GDPR, FERPA, and HIPAA guidelines.

07. DOCUMENT REVISION HISTORY

All functional requirements changes must be recorded under Named version baselines and reviewed by core engineering leads.
