

DNSMC-FE-4 · TECHNICAL REFERENCE · ANCR ECOSYSTEM

ANCRID™ MASTER WORKFLOW

ONE IDENTITY · EVERY OPPORTUNITY

Identity Layer for the ANCR™ Ecosystem

Prepared for: Tech Team

System: ANCRID™ (identity provider for the ANCR™ ecosystem)

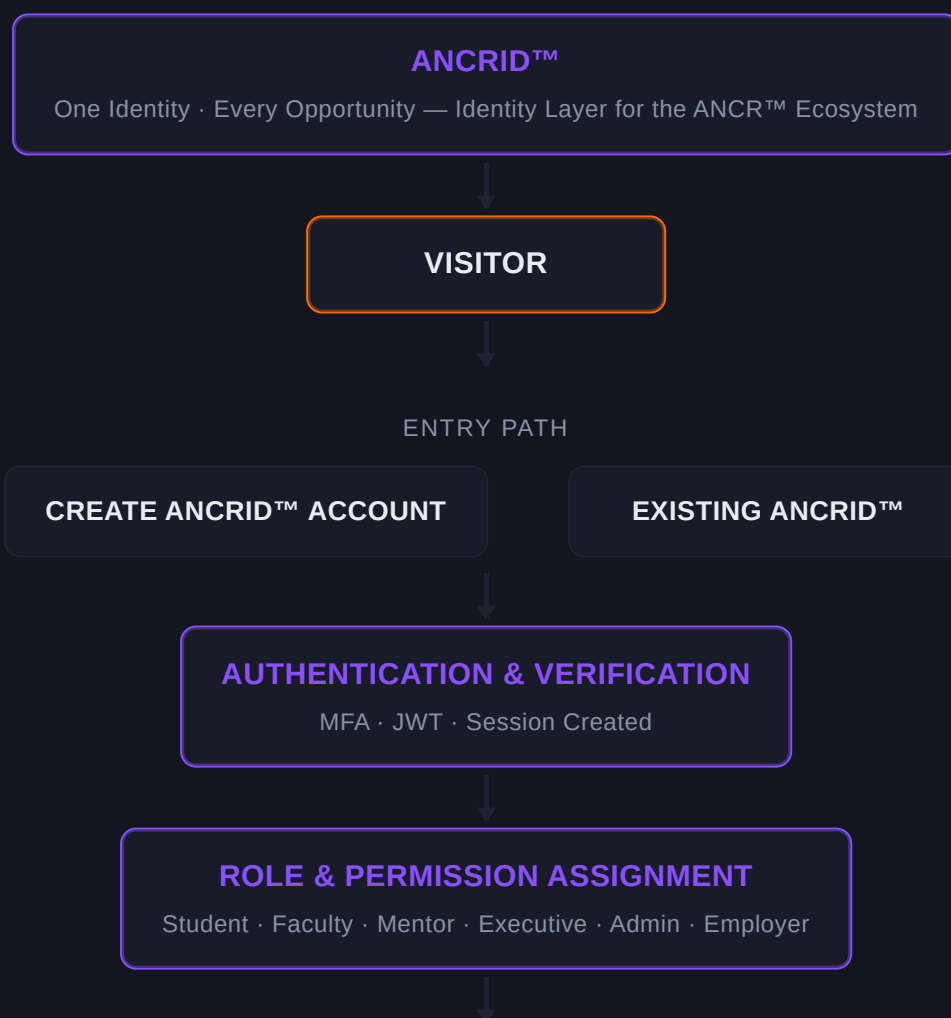

Doc type: Master Workflow Specification

PRINCIPLE

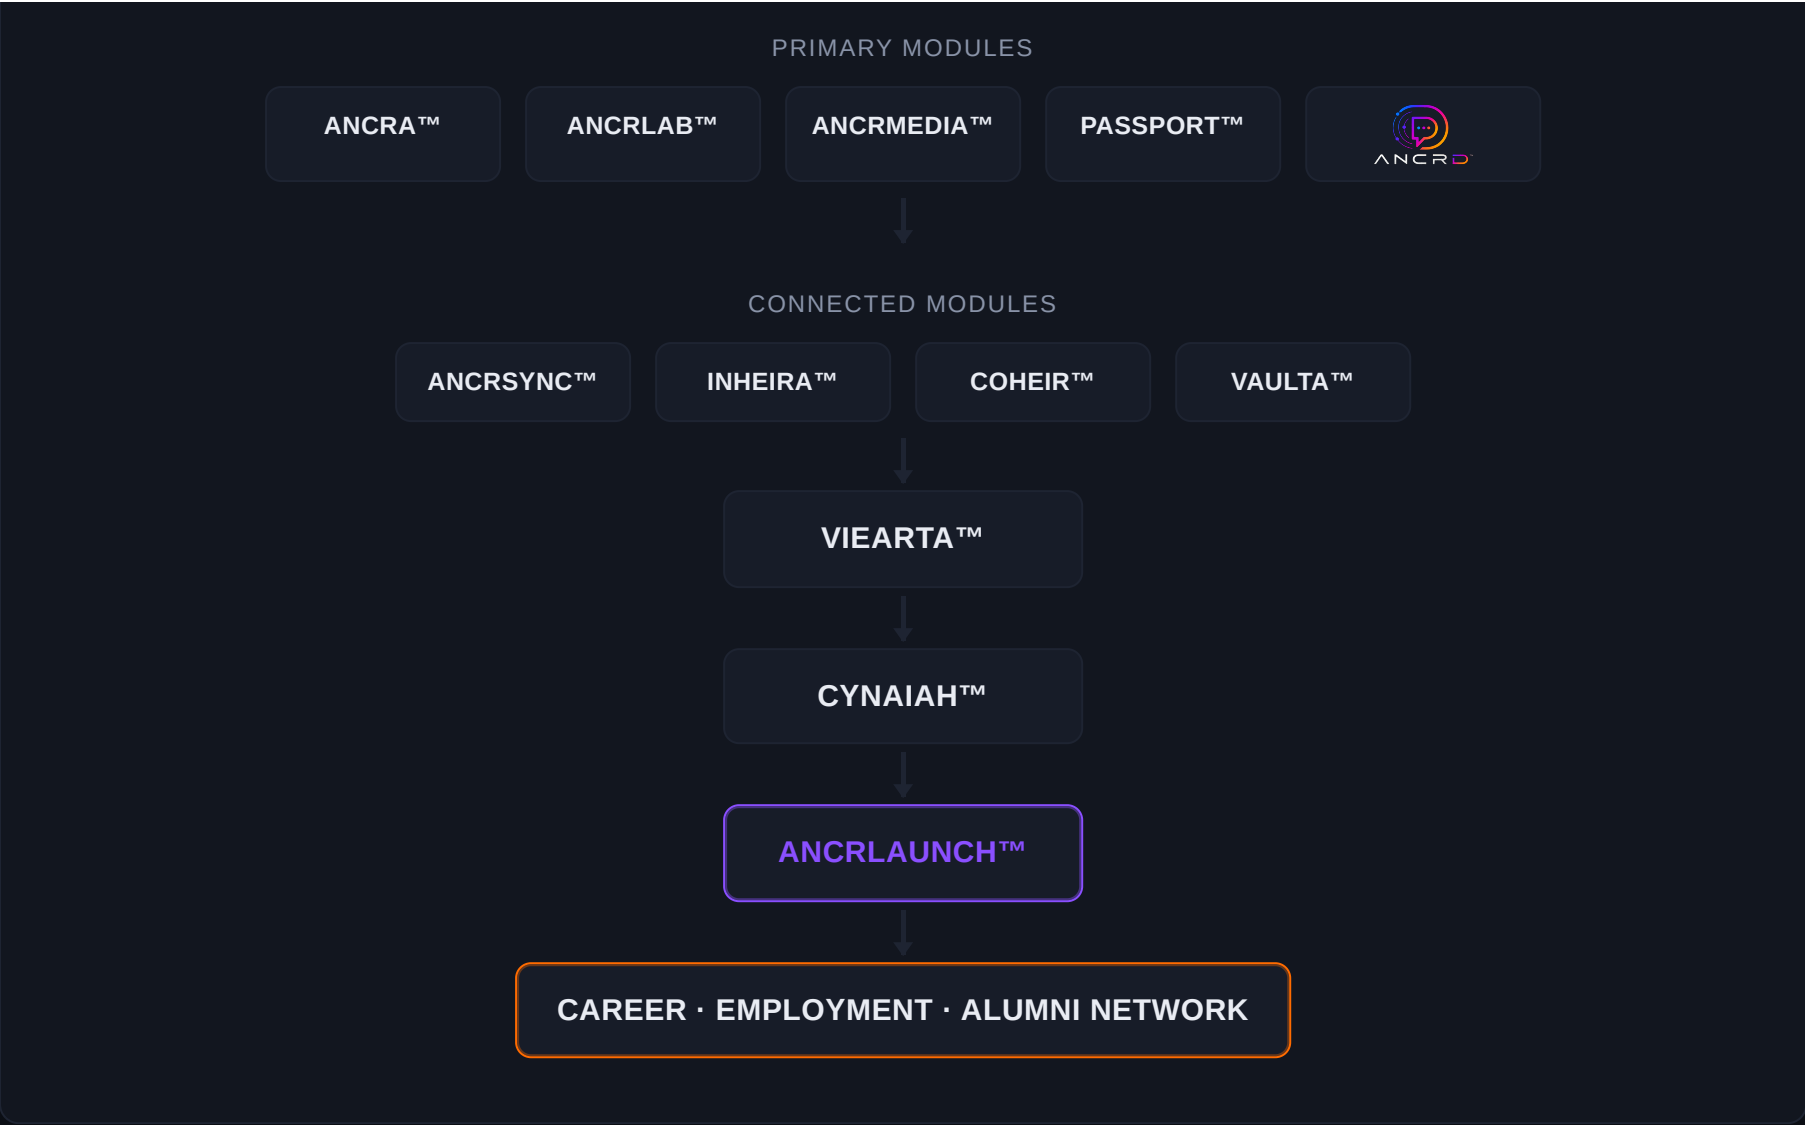

This is the master engineering workflow, following the ANCRID™ specification exactly:

- One Identity
- One Login
- One Session
- Every application consumes ANCRID
- No module has its own login

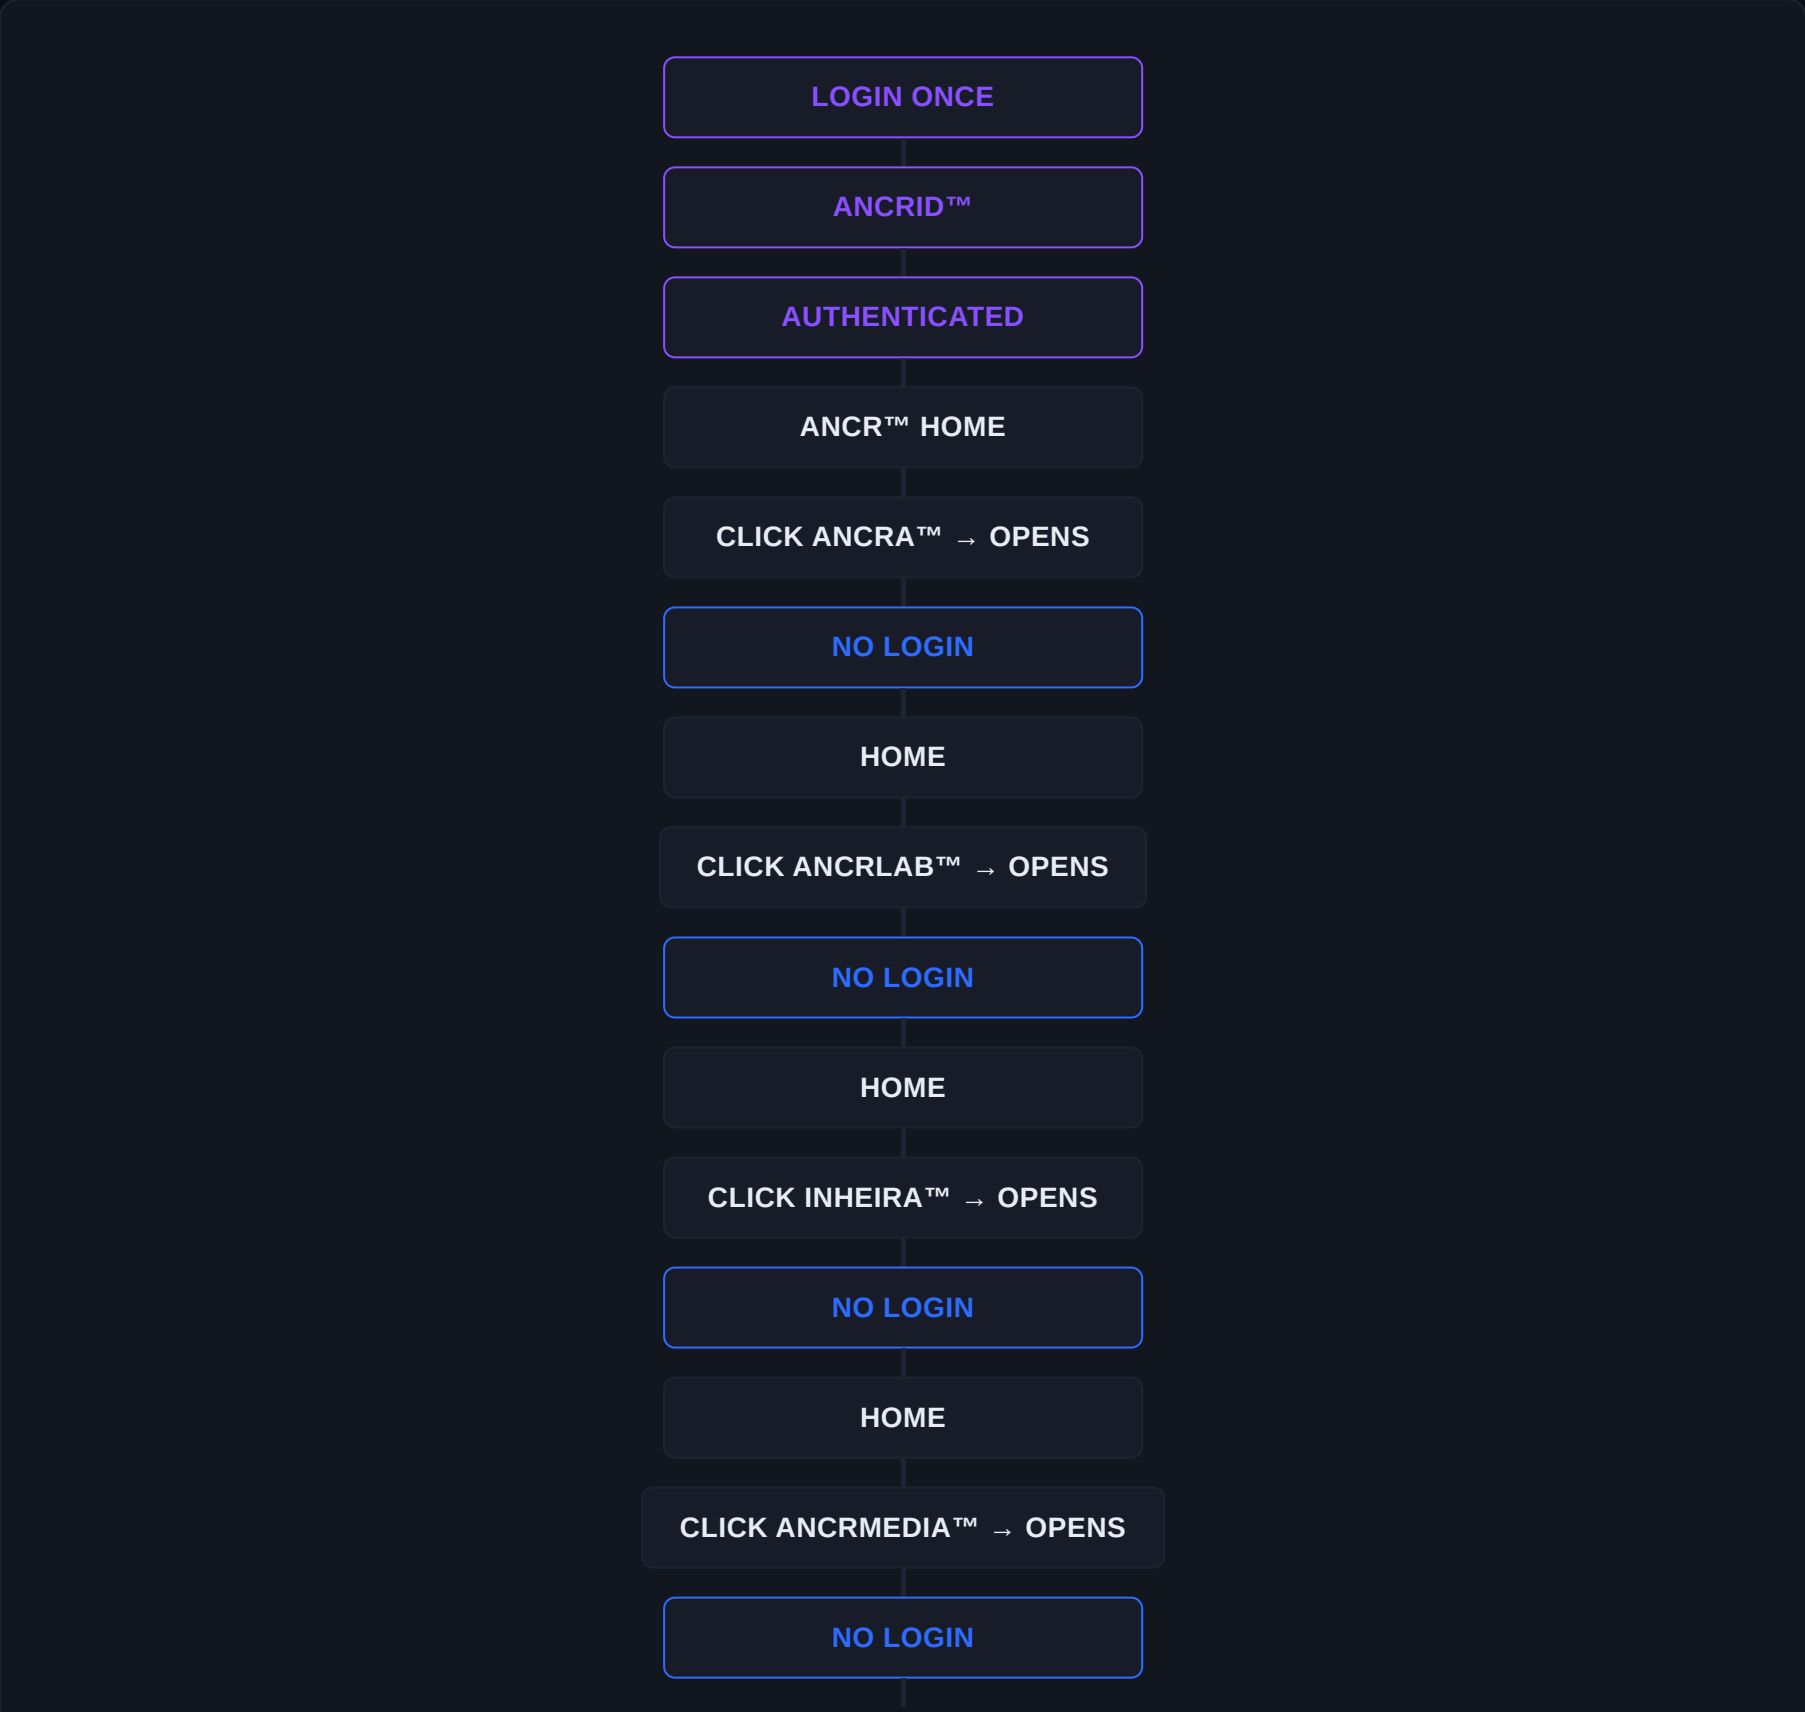

ANCRID™ MASTER WORKFLOW

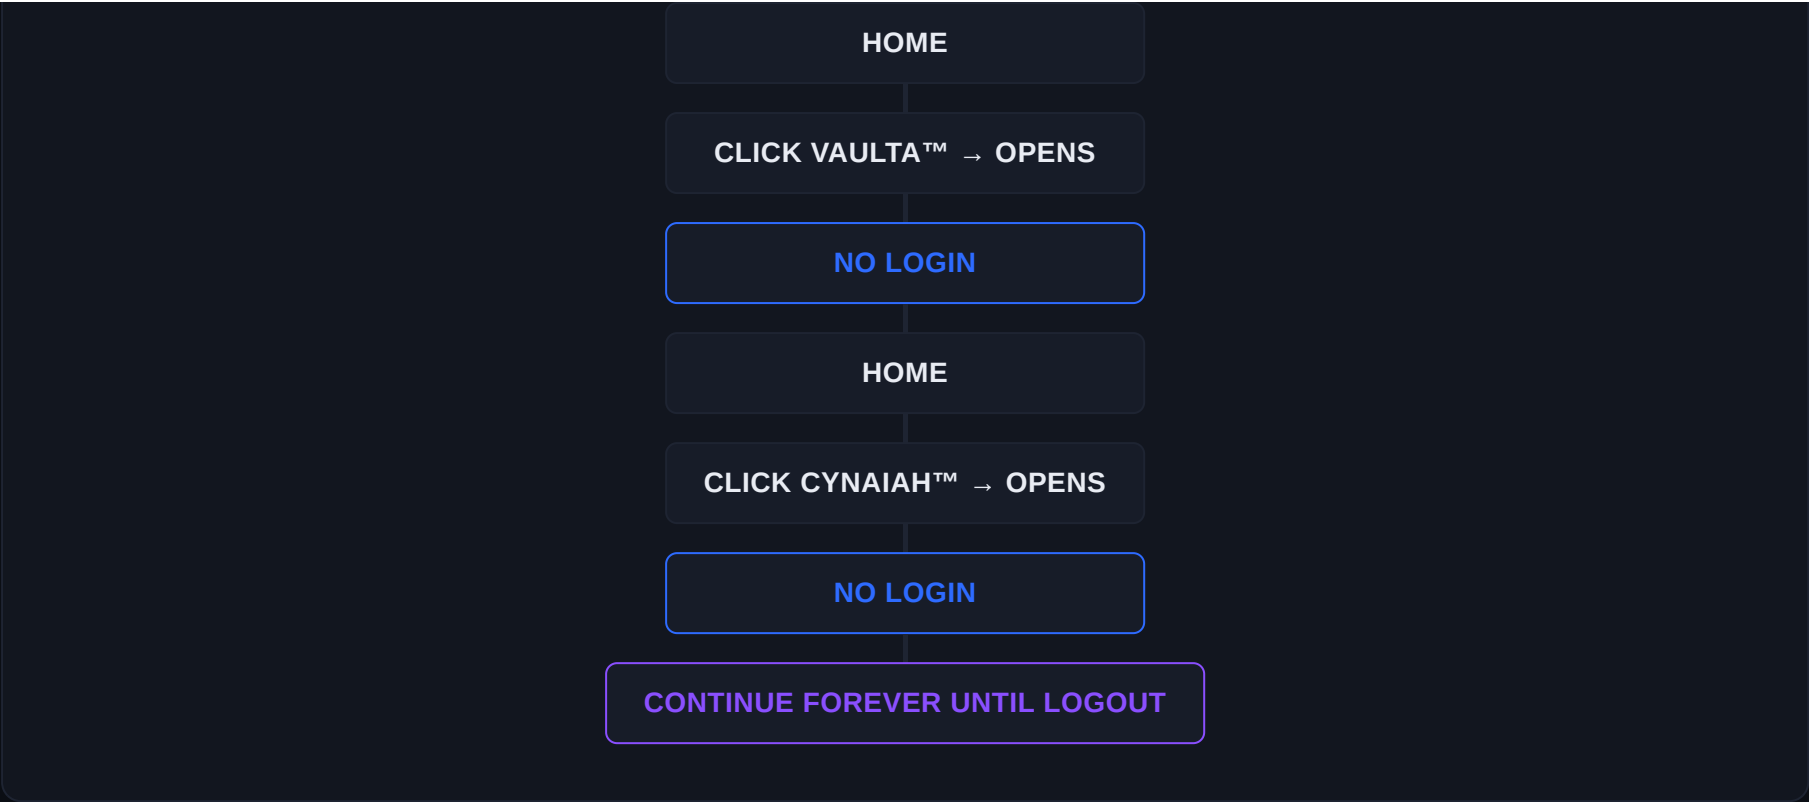

ANCR™ HOME — SINGLE SIGN-ON GATEWAY

NAVIGATION LOGIC

ENGINEERING RULE

ANCRID IS APPLE ID.

Everything else **trusts** ANCRID.

Applications never ask:

- Username
- Password
- MFA
- Verification

again. The user already proved who they are.

Every module simply checks: *Is there a valid ANCRID session?*

If **YES** — open the application.

If **NO** — redirect to ANCRID.

DOCUMENTATION LANGUAGE

ANCRID is the sole identity provider for the ANCR™ ecosystem. Every ANCR™ application consumes ANCRID authentication, authorization, permissions, and session management. No application within the ecosystem shall implement a separate login, registration, or identity store. Once authenticated through ANCRID, users may navigate freely between all ANCR™ modules without reauthentication until their secure session expires.

This reflects the product specification's requirements that ANCRID owns identity, authentication, permissions, and security; that every ANCR application consumes ANCRID authentication; and that all modules authenticate through ANCRID Single Sign-On rather than duplicating identity systems.

RECOMMENDATION

Add a dedicated **ANCR™ Home** (Ecosystem Hub) immediately after ANCRID login. This gives users a central launch point to move seamlessly between every module without ever encountering another login screen — reinforcing the "Apple ID" experience while keeping the ecosystem connected.
